Data visualization, Andriod studio,

Data structures

EDUCATION

Mannuel S. Enverga University

Foundation

2023-Present

BS in Computer Science major in
Software Engineering.

STI College Lucena

2021-2023

Senior High Diploma in Information
and Communication Technology –
Mobile App and Web
development (ICT-MAWD)

PROFILE

I'm a second year Computer Student and utilizing almost 4 years of programming experience in my own personal and school projects ranging from basics to intermediate. I'm more proficient in Java, Python and JavaScript/TypeScript. My goal is to leverage the skill set that I gained throughout my journey and create innovative software in the industry. I am eager to gain new experience and knowledge for building my career

EXPERIENCE

Liham

2024-Present

Liham is a full-stack project that I'm currently working on with Django as a backend and Vite + React as a front-end. This webapp is simple a messaging app but users can communicate with baybayin and other writing systems native to the Philippines.

Jetbucks

2025

Jetbucks is a Flutter app that mimics an e-wallet app where a user can send money with only another user's name and track their deposits. Backed with java for backend which I used Springboot for handling APIs and business logic of the app. MySQL is also used for storing user data such account, balance, and transactions.

CSMATH101

2024

CSMATH101 is a website for our class projects in college algebra course/subject/class using JavaScript, React and Firebase. I have made this class project possible and is currently available online. I was the only web developer in the class and was the only one who had 2 years of experience.

Kabaybay

2024

Kabaybay is an android app built with java. It is a project for my major class, this app teaches a user how to read and write 'Baybayin', an ancient writing system native to the Philippines.
